Skills Summary

- **Python, PostgreSQL, A/B Testing, GitHub**

EDUCATION

M.S. in Georesource and Geoenergy | *Politecnico de torino* Sept 2025 – Present

B.S. in Mining Engineering | *Mehran University of Engineering & Technology* Jan 2013 – Dec 2017

CERTIFICATIONS

Python: Beginner to advance for Data Professionals: Learned Python Programming by building two projects: Hospitality domain data analytics & Expenses tracking system. (https://codebasics.io/certificate/CB-48-484522)

SKILLS

Technical Skills: Python**,** SQL, Bash, Data Cleaning & Exploratory Data Analysis (EDA), Statistics for Data Analysis, SQL Queries, A/B testing.

Tools: Numpy, Pandas, MS Excel, MySQL, PostgreSQL, SQlite, Matplotlib, Seaborn, Ploty, Streamlit, Power BI, VS Code, Pycharm, Anaconda, PgAdmin4, Jupyter Notebook, FastAPI, GitHub, Git, GitBash,

Soft Skills: Communication, Teamwork, Problem Solving, Time Management, Critical Thinking, Adaptability, Leadership, Documentation

---

PROJECTS

Hospitality domain data analytics (AtliQ-Hotels-Data-Analysis)
(https://github.com/mukeshkd58/AtliQ-Hotels-Data-Analysis)

- AtliQ Hotels Data Analysis: A project analyzing hotel datasets through data exploration, cleaning, transformation, and insights generation. Uses Python and visualization tools to uncover trends, improve decision-making, and provide actionable recommendations for hotel operations.

Expenses tracking system (https://github.com/mukeshkd58/Project-Expensive-Tracking)

- Full Stack expense tracking project using FastAPI, Pydantic, Streamlit, MYSQL, Pandas and Python. Tracks, analyzes, and visualizes spending patterns, providing actionable insights for personal or organizational budget management.

Medical Data Extraction (https://github.com/mukeshkd58/Medical-Data-Extraction-Project)

- A python based Medical Data Extraction systems that processes scanned prescription using OpenCV, regex and Custom Python classes. It extracts patients details, applies images, thresholding, perform text parsing, and includes units tests with pytest for reliable data extraction.

Student Management System (https://github.com/mukeshkd58/Student_Result_Management_System)

- Student Result Management System (SRMS) built with Python, Tkinter, SQLite3, and Pillow. Features include course, student, and result management, search functionality, login system, and a dynamic analog clock. A complete desktop app for managing academic records efficiently.

Custom Shopping Behavior Project (SQL | Python | Power BI)
(https://github.com/mukeshkd58/Customers_Shopping_Behavior-Python-SQL-PowerBI)

- **Tools:** PostgreSQL, Python (Pandas/NumPy/Matplotlib), Power BI
- This project analyzes customer shopping behavior using transactional retail data to uncover insights into spending patterns, customer segments, product performance, and subscription behavior.
