PROFESSIONAL SUMMARY

Results-driven Data Analyst with hands-on experience in Python, SQL, and data visualization. Skilled in building end-to-end ETL pipelines, conducting exploratory data analysis (EDA), hypothesis testing, and developing interactive dashboards using Power BI and Plotly. Translates complex datasets into actionable business insights that drive measurable outcomes. Currently pursuing M.E. in Georesource and Geoenergy at Politecnico di Torino, Italy. Seeking Data Analyst roles in business intelligence, analytics, and data science.

CORE COMPETENCIES

Data Science • Data Analysis • SQL • Python • Power BI • ETL Pipeline Development • Data Visualization • Dashboard Development • Statistical Analysis • Data Cleaning • Data Modeling • KPI Reporting • Business Intelligence • Data Wrangling • EDA

TECHNICAL SKILLS

Languages & Libraries: Python, SQL, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, SciPy, Bokeh, Plotly

Data Analysis & Statistical Techniques: Regression Analysis, Classification, Clustering (K-Means, DBSCAN), K-Nearest Neighbors (k-NN), EDA, Hypothesis Testing

Tools & Platforms: Power BI, Streamlit, FastAPI, Jupyter Notebook, GitHub, MySQL, Relational Databases

Competencies: ETL Pipeline Development, Data Wrangling, Data Cleaning, Data Modeling, KPI Reporting, Dashboard Development, Business Intelligence, Geospatial Data Analysis

WORK EXPERIENCE

Data Analyst | Independent Projects | Freelance | *2025 – Present*

- Delivered end-to-end data analysis projects spanning retail, hospitality, and personal finance domains using Python, SQL, and Power BI.
- Reduced SQL query processing time for a retail vendor dataset by optimizing CTEs and filtering logic, enabling faster reporting for 10,000+ records.
- Identified $2.71M in unsold inventory and a 65.7% vendor over-dependence risk, leading to concrete diversification recommendations.
- Developed interactive Power BI dashboards quantifying a 72% cost reduction opportunity through bulk purchasing analysis.
- Built and deployed a full-stack expense tracking web application providing real-time budget insights using FastAPI and Streamlit.

PROJECTS

Vendor Performance Analysis – Retail Inventory & Sales | *SQL | Python | Power BI*

GitHub: github.com/mukeshkd58/Vendor-Performance-Analysis-SQL-Python-Powerbi

- Designed and optimized a complex SQL ETL pipeline to build aggregated summary tables from multiple relational data sources using CTEs and advanced data filtering, reducing query processing time by ~40%.
- Conducted EDA and hypothesis testing in Python to evaluate vendor profitability, pricing strategy, and inventory turnover across 500+ SKUs.

- Identified over-dependence on top 10 vendors (65.7% of total purchases) and uncovered $2.71M in unsold inventory, enabling targeted cost-saving recommendations.
- Built interactive Power BI dashboards demonstrating a 72% cost reduction opportunity through bulk purchasing strategy.

Hospitality Domain Data Analytics – AtliQ Hotels | *Python* | *Pandas* | *NumPy* | *Matplotlib*
GitHub: github.com/mukeshkd58/AtliQ-Hotels-Data-Analysis

- Performed EDA on 10,000+ hotel booking records to analyze seasonal demand fluctuations, average length of stay, and cancellation rates across multiple properties.
- Identified top 3 drivers of booking cancellations, providing data-backed insights estimated to reduce cancellation rates by 15–20%.
- Delivered actionable recommendations for dynamic pricing strategy and demand forecasting to support revenue management decisions.

Expense Tracking System | *FastAPI* | *Streamlit* | *MySQL* | *Python*
GitHub: github.com/mukeshkd58/Project-Expensive-Tracking

- Built a full-stack expense tracking application using FastAPI, Pydantic, Streamlit, MySQL, and Pandas to track, analyze, and visualize spending patterns across multiple budget categories.
- Implemented a real-time data pipeline reducing manual reporting time by 100%, replacing spreadsheet-based tracking with an automated dashboard.
